STATE OF TEXAS, Plaintiff,	@ @	IN THE DISTRICT COURT OF
VS. KATHIE BRYANT, dba BUENA	n @ @ @	TRAVIS COUNTY, TEXAS
VISTA WATER SYSTEM, Defendant.	9	250 th JUDICIAL DISTRICT

RECEIVER'S MONTHLY REPORT BUENA VISTA WATER SYSTEM BURNET COUNTY, TEXAS For the Month Ending December 31, 2011

COMES NOW, JOHN M. FULTZ, duly appointed Receiver for Buena Vista Water System (the "Water System"), and files this Receiver's Monthly Report for the month ending December 31, 2011, and would show this Court the following:

- John M. Fultz was appointed Receiver of the Water System by Receivership Order signed by this Court on July 8, 2010 (the "Order").
- 2. The Water System is alleged to be owned by Kathie Bryant, individually, d/b/a Buena Vista Water System.
- 3. The Order authorized the Receiver to take possession and control of the Water System located in Burnet County, Texas.
- 4. The Receiver employed Gulf Utility Service, Inc., (the "Operator"), on July 12, 2010. The Operating Agreement between the Receiver and Gulf Utility Service, Inc. is available and on file in the Receiver's office. The resume and operator's license are available and on file in the Receiver's office.
- 5. The Receiver operates the Water System through the Operator. The Operator has maintained the Water System, performed monthly maintenance of the Water System, filed the appropriate monthly water reports, read the meters, billed the customers, collected and deposited the funds received in payment, and prepared checks for payment of the monthly bills and returned the same to the Receiver for review and payment to the appropriate vendors.

- 6. The Receiver reviewed the Operator's Buena Vista Water System's Systems Totals Report, Profit & Loss Report, Balance Sheet and A/P Aging Detail for December 2011, copies of which are attached.
- 7. During the month of December, the Receiver continued to maintain communication via email and telephone with Michael Wortham, President of the Buena Vista Property Owners Association ("Buena Vista POA").
- 8. The Receiver confirmed through the Operator that the plant at the Water System was running well and that repairs continue to be made on an as needed basis to provide continuous and adequate supply of water to the customers of the Water System.
- 9. The Receiver took the following actions during the month of December, 2011:
 - a. On or about December 2, 2011, the Receiver received an estimate obtained by the Operator for a "package plant" at a cost of approximately \$267,000.00.
 - b. On or about December 7, 2011, the Receiver reviewed the summary prepared by the Operator regarding the three outstanding violations noted by TCEQ, a copy of which is attached hereto. These will be incorporated in the Receiver's Status Report which to be filed by January 31, 2012.
 - c. On December 4, 2011, the Receiver reviewed the Burnet County Appraisal District's statements for 2011 ad valorem taxes on property owned by Kathie Bryant as part of the Buena Vista Water System. Statements were forwarded to the Operator for payment by the receivership.
 - d. On December 15, 2011, the Receiver's assistant attended the Texas Water Development Association workshop regarding the Drinking Water State Revolving Fund. Information was forwarded to Michael Wortham, President of the Buena Vista Property Owners' Association.
 - e. The Receiver reviewed the Profit and Loss Statement for the months of January through December, 2011, reflecting a net income for 2011 of -\$10,237.07, a copy of which is attached.
- 10. The Operator performed the tasks shown on the attached work orders for the reporting month.
- 11. The Receiver will continue to operate the System through the Operator.

Signature page to follow.

This concludes the Receiver's Monthly Report for the month ending December 31, 2011.

Respectfully Submitted,

John M. Fultz, Receiver,

P./O. Box 868

Navasota, Texas 77868

936-825-7833 936-825-2354 fax

Certificate of Service

I, John M. Fultz, Receiver, certify that a copy of the foregoing Receiver's Monthly Report for the month of December, 2011, for the Buena Vista Water System, was forwarded via email on the 200 day of March 2012, to the following:

Mr. George Thomas "Tom" Bohl, Assistant Attorney General

Mr. Terence Webb, Receivership Coordinator

Mr. Keith Kebodeaux, Attorney for Kathy Bryant

Mr. Roger Borgelt, Attorney for the Buena Vista Property Owners Association

Ms. Tracy Killebrew, Attorney in Fact for Kathie Bryant

John M. Fultz

Buena Vista Subdivision - PWS ID # 0270008

December 7, 2011

Current rule violations (X3):

- 1) 30 TAC 290.45(b)(2)(F) ~ Failure to provide a <u>service pump capacity</u> of at least 2.0 gpm per connection. 156 gpm is provided and 252 gpm is required for 126 connections
- 2) 30 TAC 290.45 (b)(2)(C) ~ Failed to provide a <u>water production capacity</u> of at least 0.6 gpm for each connection. The system has 126 connections and would need to provide 75.6 gpm and currently provides 56.25 gpm
- 3) 30 TAC 290.46(d) and (r) ~ Failed to maintain pressure of at least 35 psi throughout the distribution system under normal operating conditions. The pressure check at 100 Wildflower was 34 psi.

1st two violations:

In Addressing the 1st two violations, and as discussed with TCEQ's Claudia Chaffin, Buena Vista's EXISTING Plant layout has the present pumps located PRE- filters. As a result, this pump configuration applies to BOTH violations #1 & #2 (above) that describe service pump capacity (violation #1) and water production capacity (violation #2).

System Summary:

Present:

Currently, Buena Vista averages 45,000 gallons/day (during peak-summer months, with a peak of 81,000 gallons/day; 56.25 gpm). The plant utilizes pressure filters and is configured to only treat/filter a maximum water flow of this peak rate (of 81,000 gallons). Furthermore, the distribution pipe from the plant to the elevated storage is only 2" – a further current limitation to any increased capacity requirements.

30 TAC 290 Subchapter D Summary that applies to the plant:

- (2) Surface water supplies must meet the following requirements:
- (A) a raw water pump capacity of 0.6 gpm per connection with the largest pump out of service;
- (B) a treatment plant capacity of 0.6 gpm per connection under normal rated design flow;
- (C) transfer pumps (where applicable) with a capacity of 0.6 gpm per connection with the largest pump out of service;

- (D) a covered clearwell storage capacity at the treatment plant of 50 gallons per connection or, for systems serving more than 250 connections, 5.0% of daily plant capacity;
 - (E) a total storage capacity of 200 gallons per connection;
- (F) a service pump capacity that provides each pump station or pressure plane with two or more pumps that have a total capacity of 2.0 gpm per connection or that have a total capacity of at least 1,000 gpm and the ability to meet peak hourly demands with the largest pump out of service, whichever is less. For systems which provide an elevated storage capacity of 200 gallons per connection, two service pumps with a minimum combined capacity of 0.6 gpm per connection are required at each pump station or pressure plane; Buena Vista currently has three (3) 10,000 gallon storage tanks providing 30,000 gallons of combined storage.

Options:

- 1) IMPORT water via a piping interconnect with the City of Burnet, Texas ~
 - a. Approx Cost \$1MM

or

- 2) INSTALL packaged plant system (see attached quote) inclusive of a 100 gpm SIEMENS Tri-Mite Factory assembled Packaged Treatment System (2 units, 50 gpm ea) ~
 - a. Approx Cost \$267,000 + Pipe Install (Approx \$50,000)
 - b. Increase distribution line size from production plant to storage tank area (currently 2", possibly increase to 4" within existing easement) ~ Approx cost \$100,000

or

- 3) Request TCEQ VARIANCE, as indicated in 290.45(g)(1). And we would request the opportunity and allow for the necessary time to apply for the variance on violations #1 and #2. Historical plant data will illustrate that the plant averages 45,000 gallons/day (with a peak of 60,000 gallons/day; 42 gpm). Variance Summary for 290.45(g)(1):
 - (g) Alternative capacity requirements. Public water systems may request approval to meet alternative capacity requirements in lieu of the minimum capacity requirements specified in this section. Any water system requesting to use an alternative capacity requirement must demonstrate to the satisfaction of the executive director that approving the request will not compromise the public health or result in a degradation of service or water quality. Alternative capacity requirements are unavailable for groundwater systems serving fewer than 50 connections without total storage as specified in subsection (b)(1) of this section or for noncommunity water systems as specified in subsections (c) and (d) of this section.

- (1) Alternative capacity requirements for public water systems may be granted upon request to and approval by the executive director. The request to use an alternative capacity requirement must include:
- (A) a detailed inventory of the major production, pressurization, and storage facilities utilized by the system;
- (B) records kept by the water system that document the daily production of the system. The period reviewed shall not be less than three years. The applicant may not use a calculated peak daily demand;
- (C) data acquired during the last drought period in the region, if required by the executive director;
- (D) the actual number of active connections for each month during the three years of production data;
- (E) description of any unusual demands on the system such as fire flows or major main breaks that will invalidate unusual peak demands experienced in the study period;
- (F) any other relevant data needed to determine that the proposed alternative capacity requirement will provide at least 35 psi in the public water system except during line repair or during fire fighting when it cannot be less than 20 psi; and
- (G) a copy of all data relied upon for making the proposed determination.

3rd violation:

In addressing the 3^{rd} violation (30 TAC 290.46(d) and (r)) ~ Failed to maintain pressure of at least 35 psi throughout the distribution system under normal operating conditions.

System Summary:

Present:

Currently, Buena Vista supplies water to approximately 126 connections. The main system storage consists of three (3) 10,000 gallon storage tanks providing 30,000 gallons of storage (~ each storage tank is approximately 20' in height) with a geographic location currently sitting on one of the system's higher plateaus. Water pressure at times can vary to levels below 35 psi

Options:

- 1) Install a standpipe in the existing storage area approximately 85' tall ~
 - a. Approx Cost \$100,000
 - b. Distribution Line Upgrade Approx Cost \$300,000
 - ***** NOTE: Should standpipe be considered, there is a strong possibility that the existing booster station (on Buena Vista drive) could be elimated due to full system pressure provided by standpipe*****
